No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 9

## ALIGNMENTS

```
Proteins with cell migration stimulatory activity used in treating wound and preventing scarring.
                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention provides a human migration stimulatory factor (MSF) protein. Host cells containing a replicable vector comprising the MSF encoding nucleic acid can be used for the recombinant production of the protein. The polypeptide can be used for modulating cell migration, healing a wound and for preventing scarring. Sequences AAY28902-906 represent peptide epitopes of MSF against which monoclonal antibodies that are specific to MSF and do not cross-react with fibronectin are
                                                                                                                  Migration stimulatory factor; MSF; cell'migration; modulation; human; wound healing; scarring; MSF1-alpha; epitope; fibronectin.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a modified fibrononectin collagen-
binding domain. The protein is used to construct a collagen-binding
physiologically active polypeptide. This polypeptide comprises a peptide
from fibronectin ligated to a physiologically active peptide. The
polypeptides are used in an agent for enabling topical retention or
sustained release of a physiologically active peptide or physiological
activity imparting agent. They may be used in gene therapy and in tissue
                                                                                                                                                                                                                                                                       Fibrononectin; collagen-binding domain; sustained release; gene therapy; physiologically active polypeptide; topical retention; tissue regeneration.
                                                                                                                                                                                                                                             Amino acid sequence of modified fibrononectin collagen-binding domain.

Site_2: Smal; A mini-library was made by cloning products derived from ORESTES PCR (U.S. Letters Patent application No. 196,716 - Ludwig Institute for Cancer Research) profiles into the pUC 18 vector. Reverse transcription of tissue mRNA and cDNA amplification were performed under low stringency conditions."

Patent NO. 6566607

GENERAL INFORMATION:
APPLICANT: Shyjan, Andrew W.
TITILE OF INVENTION: METHODS AND COMPOSITONS FOR THE IDENTIFICATION AND ASSESSMENT
TITLE OF INVENTION: OF PROSTATE CANCER THERAPIES AND THE DIAGNOSIS OF PROSTATE CANCE
FILE REFERENCE: 07334-074001
CURRENT APPLICATION NUMBER: US 60/079,303
PRIOR FILING DATE: 1998-12-23
PRIOR FILING DATE: 1998-12-24
NUMBER OF SEQ ID NOS: 191
SOFTWARE: FREESEQ for Windows Version 4.0
SEQ ID NO 38
LENGTH: 7679

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Description

This invention relates to a novel hepatocyte growth factor (HGF) derivative. Specifically, it refers to a fusion protein containing an HGP polypeptide and the collagen binding domain of fibronectin, where the collagen binding property and the HGF activity are maintained. The present invention describes this HGF derivative as a live organ transplant material that can be an artificial blood vessel or a stent in which the collagen material is bound on its surface in a sheet-like molding. Accordingly, it is useful for inducing and enhancing angiogenesis (compared to natural type HGF) in damaged tissue and thus can enhance tissue regeneration. Furthermore, it exhibits vulnerary activity with increased stability and collagen binding properties. This polynucleotide sequence is the DNA encoding the human fibronectin exemplification of the invention.

```
Collagen-binding active polypeptide for use in an agent for enabling topical retention or sustained release of a physiologically active peptide or physiological activity-imparting agent comprises a fibronectin peptide.
                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence encodes a modified fibrononectin collagen- binding domain. The protein is used to construct a collagen-binding physiologically active polypeptide. This polypeptide comprises a peptide from fibronectin ligated to a physiologically active peptide. The polypeptides are used in an agent for enabling topical retention or sustained release of a physiologically active peptide or physiological activity-imparting agent. They may be used in gene therapy and in tissue regeneration

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Description

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 2, Ap

Sequence 16, Application US/08153799
; Patent No. 5766883
; GENERAL INFORMATION:
; APPLICANT: Ballance, David J
APPLICANT: Goodey, Andrew R
; TILE OF INVENTION: Polypeptides
; WUMBER OF SEQUENCES:
; ADDRESSEE: R Hain Swope, BOC Health Care Inc
; STREET: 100 Mountain Avenue
; CITY: Marray Hill
; STATE: New Jersey
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/153,799
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CLASSIFICATION: 435

Proteins with cell migration stimulatory activity used in treating wound and preventing scarring: WPI; 1999-430039/36.

Claim 29; Page 61; 86pp; English.

can The invention provides a human migration stimulatory factor (MSF) protein. Host cells containing a replicable vector comprising the MSF encoding nucleic acid can be used for the recombinant production of the protein. The polypeptide can be used for modulating cell migration, healing a wound and for preventing scarring. Sequences AAV28912-913 represent peptide epitopes of MSF against which monoclonal antibodies cabe raised

The present invention describes a hybrid polypeptide comprising a collagen-binding domain composed of an amino acid sequence ranging from Ala at position 260 to Arg at position 480 of human fibronectin or a similar amino acid sequence but with some amino acids deleted, similar amino acid sequence but with some amino acids deleted, substituted, inserted or added, and a functional polypeptide linked containing a functional polypeptide-modified collagen obtained by formulating a polypeptide originated from the hybrid polypeptide with collagen into a complex; (2) a gene encoding the hybrid polypeptide; and (3) a transformant containing the encoding the hybrid polypeptide; and (3) a transformant containing the gene. The hybrid polypeptide is useful in drug delivery system for functional polypeptides, formulating into complex with collagen to give functionally modified collagen matrix as blomaterial for tissue regeneration. The hybrid polypeptide has superior activity and stability in the body for a long period of time, with collagen the human fibronectin collagen-binding domain, which is used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; fibronectin; collagen-binding domain; collagen-binding hybrid; basic fibroblast growth factor; enterokinase recognition site; collagen; epidermal growth factor; drug delivery system; tissue regeneration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Collagen-binding hybrid polypeptide, useful in drug delivery system for functional polypeptides, formulating into complex with collagen to give functionally modified collagen matrix as biomaterial for tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequences AAH23071-23152 represent nucleic acid sequences derived from osteoarthritis tissues. The sequences are useful as probes and for the diagnosis or prognosis of mammalian osteoarthritis. The polynucleotides and polypeptides of the invention are useful for generating diagnostic reagents, as targets for small molecule drug development, generation of therapeutics, and cloning genes. Specific antibodies are used to generate enzyme linked immunosorbent assays for detection of osteoarthritis. The invented molecules can be used to treat osteoarthritis or to analyse the disease-modifying activity of osteoarthritis drug activity of osteoarthritis drug activity of osteoarthritis drug activity of osteoarthritis drug activity of sequences include atopic, inflammatory and infectious disorders e.g. Crohn's disease and sepsis, and wound

other Hepatocyte growth factor HGP derivative for inducing angiogenesis, comprises fusion protein containing HGP polypeptide and polypeptide (than HGF, and polypeptide having collagen binding property connected directly or through intron.

Example 1; SEQ ID NO 2; 51pp; Japanese.

This invention relates to a novel hepatocyte growth factor (HGF) derivative. Specifically, it refers to a fusion protein containing an HGF

polypeptide and the collagen binding domain of fibronectin, where the collagen binding property and the HGF activity are maintained. The present invention describes this HGF derivative as a live organ transplant material that can be an artificial blood vessel or a stent in moding. Accordingly, it is useful for inducing and enhancing anglogenesis (compared to matural type HGF) in damaged tissue and thus can enhance tissue regeneration. Furthermore, it exhibits vulnerary activity with increased stability and collagen binding properties. This polymucleotide sequence is the DNA encoding the human fibronectin collagen binding domain from Ala260 to Ala484, given in an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Collagen-binding hybrid polypeptide, useful in drug delivery system for functional polypeptides, formulating into complex with collagen to give functionally modified collagen matrix as biomaterial for tissue
                                                                                                                                                                                                                                                                                                                                                                                                 ThraspHisThrValLeuValGInThrargGlyGlyAsnSerAsnGlyAlaLeuCy8His
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              "human fibronectin collagen-binding domain"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human fibronectin collagen-binding domain encoding cDNA SEQ ID NO:3.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 17,

Proteins with cell migration stimulatory activity used in treating wound and preventing scarring.

Claim 29; Page 61; 86pp; English.

The invention provides a human migration stimulatory factor (MSF) protein. Host cells containing a replicable vector comprising the MSF encoding nucleic acid can be used for the recombinant production of the protein. The polypeptide can be used for modulating cell migration, healing a wound and for preventing scarring. Sequences AAY28912-913 represent peptide epitopes of MSF against which monoclonal antibodies can be raised
